

26th-27th September 2013, Milan, Italy - The PATHFINDER Journey Continues..... Second Project Meeting

Hosted by Politecnico di Milano, the 7 beneficiaries of the PATHFINDER CSA project met for the second time to give hands and feet to its mission: *To increase knowledge and awareness, and pointing out the future on the use and impact of simulation and forecasting technologies.*

On the **Learn** activities project partners discussed three existing roadmaps to find common themes and to align PATHFINDER's future road mapping activities. In particular the roadmaps of FOFRoadmap2020, ActionPlanT and IMS2020 have been studied. Partners have not only identified common themes but also derived 'lessons learned' to ensure efficient and effective PATHFINDER Roadmap activity.

The second project meeting begins

Learn Roadmap Make Aware

The three pillars of the PATHFINDER Project

To **Make** the European Manufacturing industry **Aware** of PATHFINDER's results and outcomes, a website has been created and made available: www.pathfinderproject.eu. On this website current successful applications of Simulation and Forecasting Technologies in the manufacturing industry will be made available soon while later on scenarios of future applications will be presented.

As PATHFINDER is not a stand-alone initiative from the Public-Private-Partnership between the beneficiaries TTS (Italy), Delcam (United Kingdom), Holonix (Italy), SUPSI (Switzerland), SmartFactory (Germany), University of Patras-LMS (Greece), Politecnico di Milano (Italy) and the European Commission, its participation in the I4MS initiative has been discussed. In addition PATHFINDER's contribution to this initiative's gate (www.i4ms.eu) has been further detailed to enable amplifying of PATHFINDER's outcomes towards the European Manufacturing industry via this gate.

In the coming month a state of the art analyses of current Simulation and Forecasting technologies will be completed while also work will be done on creating the aforementioned success stories and future scenarios.

Acknowledgements:

This project is co-funded by the European Commission as part of the European Economic Recovery Plan (EERP) adopted in 2008. The EERP proposes the launch of Public-Private Partnerships (PPP) in three sectors, one of them being Factories of the Future (FoF). Factories of the Future is a EUR 1.2 billion program in which the European Commission and industry are collaborating in research to support the development and innovation of new enabling technologies for the EU manufacturing sector.
