

Liquids Pipeline Solutions

Schneider Electric

www.schneider-electric.com

Schneider Electric SA is a France-based multinational corporation that specializes in electricity distribution, automation management and produces installation components for energy management.

Schneider Electric SimSuite Pipeline is a transient pipeline modelling and simulation system for gas and liquids pipelines. It is the most technologically advanced and dependable pipeline simulation system in the industry. Schneider Electric SimSuite optimizes management of your pipeline operations for greater efficiency, effectiveness and an improved bottom line. In a virtual world, it can be proven that your pump stations, compressor stations, injection/ delivery stations, tank farms, valves and control logic work flawlessly before the real world puts them to the test.
